Fees represent the most currently available information and are subject to change without prior notice. Fees are net of any contractual reimbursements to you.

Principal Investment Strategies and Risks of Investing in the Fund

The fund seeks long-term growth of capital, and future rather than current income. The fund invests in companies whose assets it believes are good prospects for long-term growth. The fund may invest in foreign securities. The fund uses a bottom-up investment style to manage its investments. Securities are selected based on fundamental analysis (e.g., earnings, cash flows, competitive position and management talent) by a group of quantitative analysts who compile data, perform security screening, and conduct performance analytics. Company visits are a key feature of the fundamental research.

The fund's total return will fluctuate over a wide range, consistent with its reliance on investing in stocks. Investors in the fund should have a long-term investment horizon. The fund is not a complete investment program and returns may lag the returns of a balanced portfolio with comparable risk. The fund's emphasis on large-cap growth stocks may cause it to lag the returns of the broad U.S. stock market. The fund's strategy for outperforming its benchmark may cause it to lag the benchmark as the strategy relies on predictions and incurring trading costs through security turnover. Your investment in the fund is not a bank deposit and is not insured or guaranteed by the F.D.I.C. or any other government entity. It is possible to lose money investing in the fund and returns may not keep pace with inflation.

Performance Alarms	1	0	-	2	0	-	0

For periods prior to July 2002, actual historical performance data has been adjusted for fees and/or designs for multiple manager funds that are specific to the FRS. Beta is the average percent change in the fund's return if there is a 1% change in the benchmark's return. Tracking Error is the standard deviation of the statistically unexplained difference between the fund's return and the benchmark return. Performance alarms are a statistical measure of underperformance relative to the benchmark. Multiple alarms may imply a higher risk of future underperformance.
